Description

Martin Lishman AgroLog Wireless Moisture & Temperature Probe

MD-GRN6200

Martin Lishman AgroLog Wireless Moisture & Temperature Probe

With its advanced sensor technology, the AgroLog probe provides users with the crucial knowledge of equilibrium moisture content (EMC) specific to their grain.

Understanding the EMC is vital for effective grain drying. Farmers and grain handlers can ensure safe storage conditions while avoiding unnecessary energy consumption and economic losses associated with over-drying.

One of the key advantages of the AgroLog Probe lies in its multiple sensors, which can help identify the location of the drying front. This significantly reduces the risk of over-drying.

Each probe displays its own data on the **AgroLog App** and it can be moved around to wherever it is needed most. ** Data charge per AgroLog probe applies.*

The AgroLog probe has been constructed from the highest quality materials to withstand the rigours of farm use. Aluminium, fibreglass and ABS make up the probe's construction and is even fully waterproof.

The probe has 2 moisture sensors and 3 temperature sensors along its length. The data from these sensors is collected and combined with extensive calibrations to give an accurate full report of the crop's condition.

Martin Lishman also provide a full 12 month warranty and a complete after-sales service and calibration back-up capability.
