Description

Martin Lishman P2 Pile Dry Cooling Fan

Pile-Dry Agricultural Cooling Fans sustain high airflow at high pressure.

This, coupled with the high free airspace in the perforated Pile-Dry Pedestal ducts, means they will dry grain effectively in favourable ambient conditions.

There have been examples of drying grain from as high as 35% or, more typically, from 19% to below 15% with no loss of quality.

P2 Pedestal and F2 Fan

- The P2 Pile-Dry Pedestal is for crops stored between 2.5 and 3m deep. It can be extended up to 4.8m if the crop is surcharged
- One P2 should be positioned in the centre of each 6m x 6m floor area
- If stored grain is above c.18% moisture move the Pedestals closer together and store no more than 3m deep

Success depends on favourable ambient conditions, efficient fan control, fan strength and the number of fans used.

Must be installed and used with a thermal overload.

Green Pile Dry Pedestal may be purchased separately.
